

Is your child diagnosed with an Autism Spectrum Disorder?

Is your child between the ages of 6-9.5 years old?

-  If so, your child may be eligible for a 24-week study on behavioral treatments to improve functional skills in children with Autism.
-  Eligible participants receive Autism diagnostic testing, and an assessment of functional skills and sensory behaviors.
-  The study also uses EEG, which is a simple, non-invasive method to observe brain activity.
-  Eligible participants may be randomly selected to receive 30 sessions of either sensory integration therapy or behavioral intervention.
-  Participants will be compensated.
